

BIM & YOU | EP.06: Ready, Automate Viewsets, Go

Stop manually ticking checkboxes in Revit Publish Settings—build and populate all project Viewsets in one click.

Youssef Adel
BIM Coordinator

STEP 1 // THE PROBLEM

MANUAL BOTTLENECK →

Manual 1-by-1 View Selection

- Scrolling through hundreds of model views and sheets to tick checkboxes manually before every cloud publish.
- High risk of missing updated sheets or accidentally publishing internal working views.
- Repeating the same tedious setup across multiple submission sets.

STEP 2 // THE INPUTS

3 SIMPLE PARAMETERS →

What You Feed the Script

01. COORDINATION VIEW

3D Export View

Select the dedicated 3D view used for clash detection and model coordination.

3D View: NAVISWORKS

02. FILTER RULE

Sheet Parameter

Filter active project sheets automatically using a parameter rule.

Drawn By $\neq$ "AP"

03. TARGET SETS

Viewset Names

Define the submission packages to create or update in the model.

DESIGN / CONST / AS-BUILT

STEP 3 // THE CORE LOGIC

DYNAMO AUTOMATION PIPELINE →

How the Script Processes the Data

STAGE A →

Collect Sheets

Grab all sheets in the model and read their parameter values.

All Elements of Category

STAGE B →

Filter Sheets

Exclude placeholder sheets automatically using a boolean mask.

List.FilterByBoolMask

STAGE C →

Merge 3D View

Combine the 3D coordination view with the filtered sheet list.

List.Create + Flatten

STAGE D ✓

Build Viewsets

Create and overwrite the Publish Sets directly inside Revit.

ViewSet.ByViewsName

STEP 4 // THE RESULT

READY TO PUBLISH

One-Click Standardized Output

Run straight from **Dynamo Player**—no need to open the graph or manually check a single box.

EXECUTION METHOD

1 Click

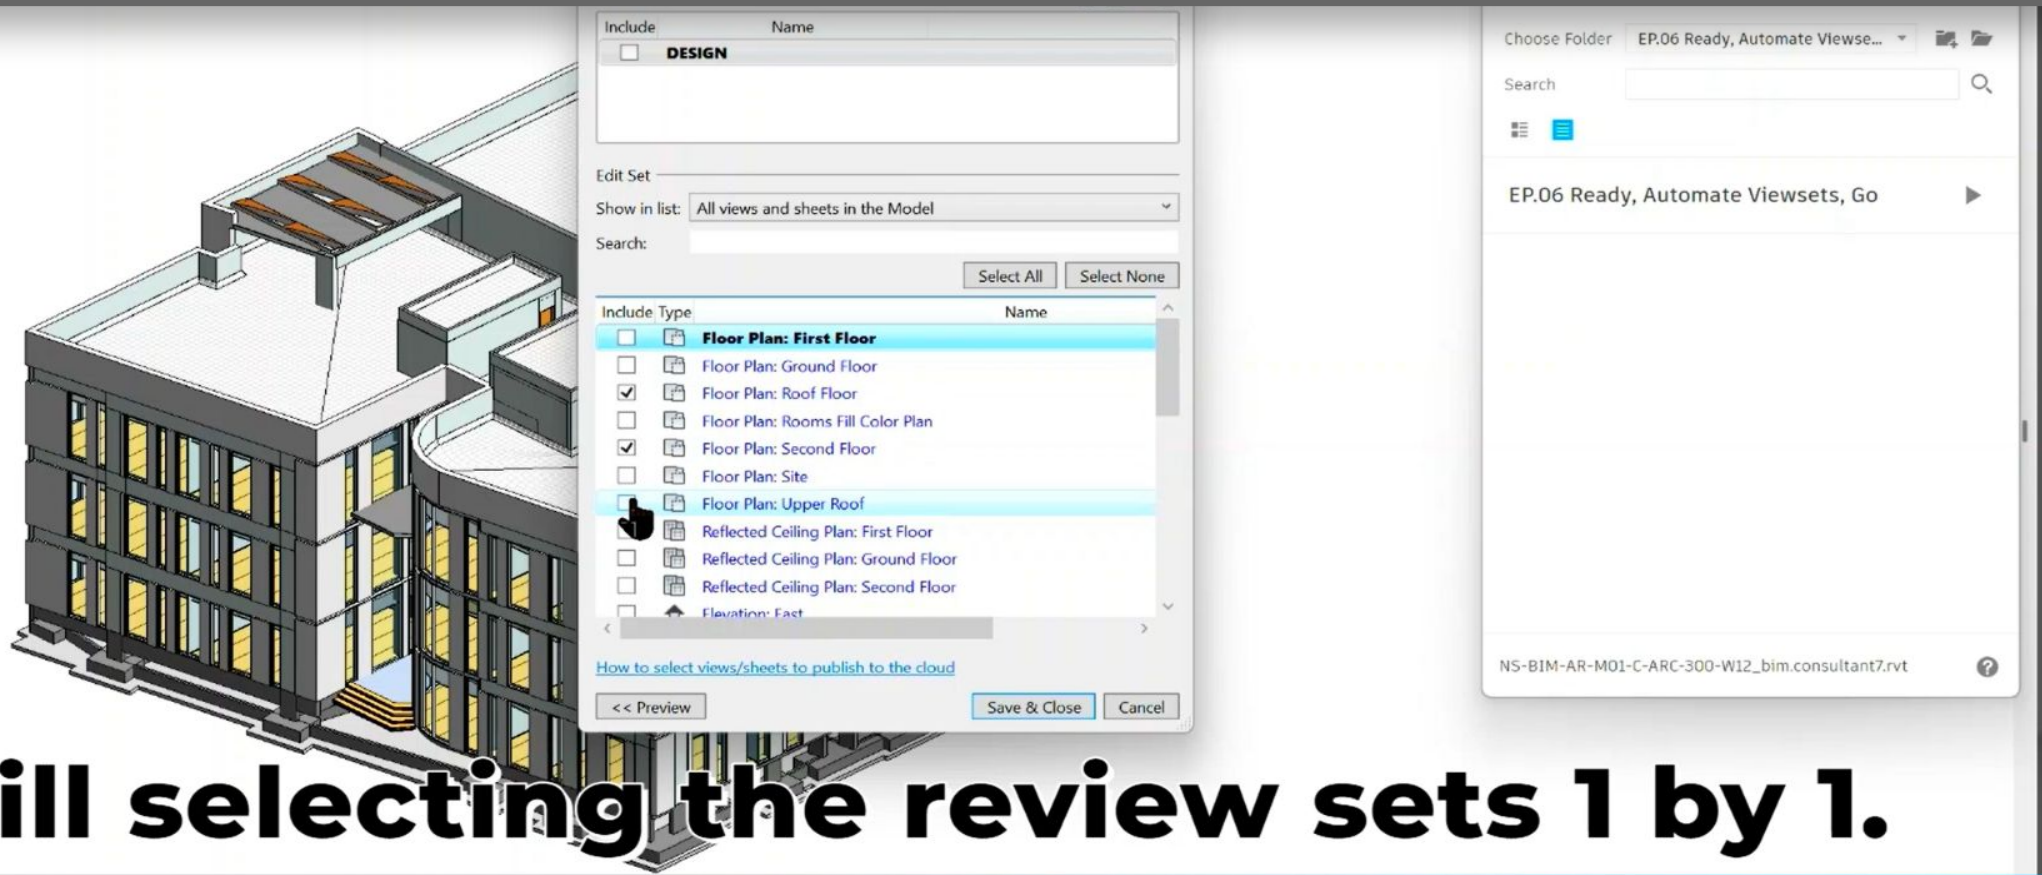

Via Dynamo Player

QUALITY CONTROL

100% Rule-Based

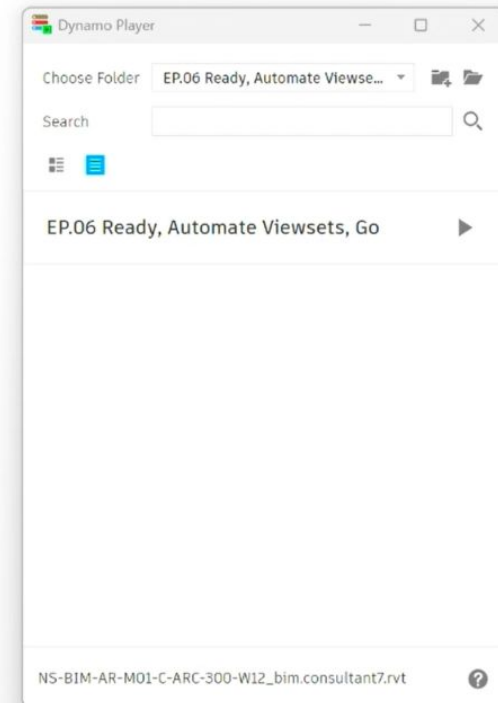

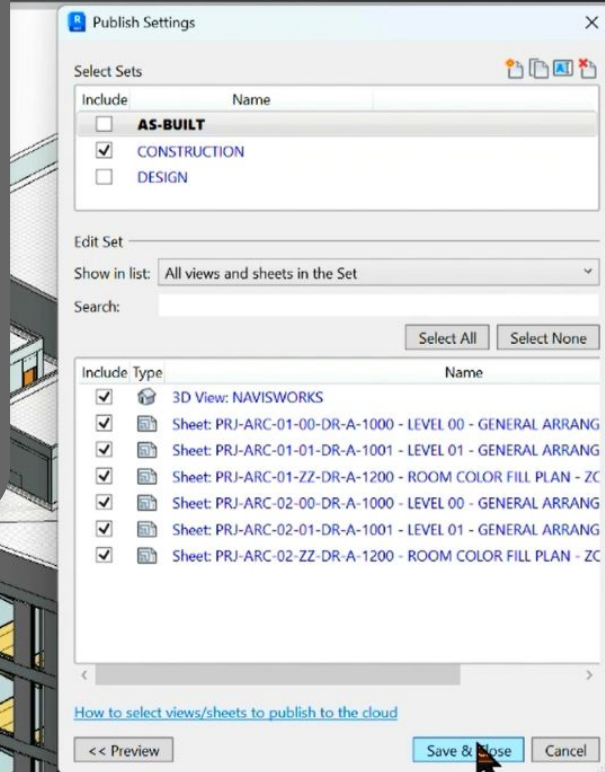

3D View + Verified Sheets

No more manual selection

output:
1-All your view sets

2-Coordination & sheets added

ready to publish.
