

Creating a Coordination View

Stop building and locking coordination views by hand.

One Dynamo script.

Every model.

The Daily Bottleneck

- **Tedious repetition**

Manually creating and locking every view you open.

- **Wasted processing time**

Doing this for each model you open.

- **Human error**

Views left unlocked. Others start editing them.
Inconsistent naming.

THE FRAMEWORK

Dynamo inside Autodesk Revit

Checks whether the
view already exists.

Never creates duplicates.

Automatically builds a
locked Navisworks 3D view
with a consistent name.

The Setup

- **Revit model**

Open, linked to your coordination models.

- Dynamo graph

**EP.01 Create the
NAVISWORKS view**

- Coordination view name in one String node

NAVISWORKS

The Execution

STRING NODE

NAVISWORKS

- **Dynamo Graph**

Update the name to your linking.

- **Run the script**

Click the run button.

- **Check the result**

Check at least one Revit model.

THE IMPACT

90%

Improvement in team awareness
of the coordination view.

Focus on coordination, not repetitive
tasks.

No worry about how your view gets
adjusted.
