BIM && YOU · EPISODE 08

ISO 19650 Automated NWC Exporter

One click exports your updated **Revit models** directly to Navisworks, with zero manual export overhead.

YOUSSEF ADEL

BIM COORDINATOR

AUTOMATION TARGET

Multi-Model Batch NWC Pipeline

STANDARDS COMPLIANCE

ISO 19650 Naming Protocol

Made with GAMMA

CURRENT BOTTLENECK

Manual NWC exports burn time and hide errors

- OPENING EVERY MODEL ONE BY ONE TO EXPORT

Repetitive UI navigation across large federated projects drains **billable coordination hours** and forces engineers into dead waiting cycles.

- STALE FILES: NO CLEAR SIGN OF WHAT WAS UPDATED AND EXPORTED

Without automated timestamps or sync flags, coordination sessions run on **outdated trade geometry**, masking clashes until site delivery.

- HUMAN ERROR: WRONG FOLDER, WRONG NAME, MISSED MODEL

Manual file saving routinely breaks **ISO 19650 container codes**, scattering NWC revisions across unauthorized directory paths.

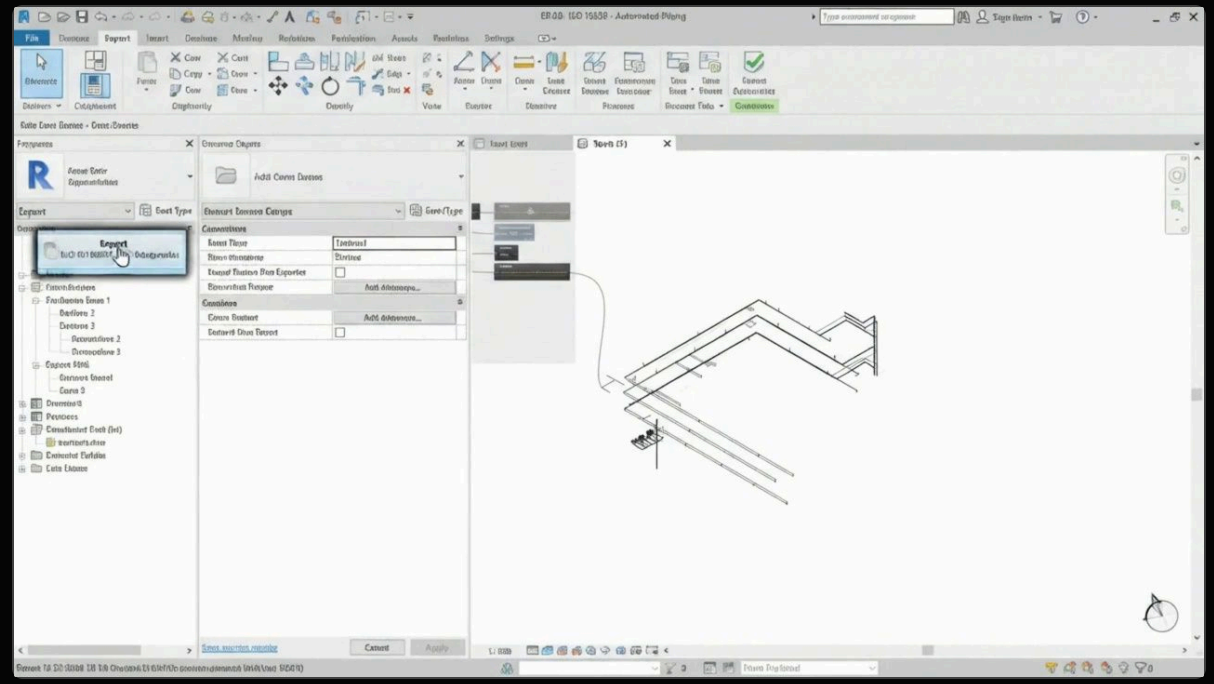

Made with GAMMA

THE AUTOMATION LOGIC

A Dynamo script that exports for you

A **Dynamo Player script** runs the export across your Revit models in **one pass**.

It replaces repeat clicks across disciplines, leaving every NWC current, perfectly validated, and consistently named.

Revit Dynamo Visual Programming Canvas · Automated Export Graph

EXECUTION

Single-Pass Batch

INTEGRITY

100% ISO Standard

Made with GAMMA

CONFIGURATION REQUIREMENTS

Set up three inputs first

Lock down these parameters inside the Dynamo Player interface before initiating the automated run.

INPUT 01

Revit Models

- **Source .RVT files** staged for federation

Target the active model directory or linked models to process without manual file opening.

INPUT 02

Output Folder

- **Designated NWC export directory**

Defined through the Dynamo Player folder path so exported caches route directly to the coordination root.

INPUT 03

Naming Rule

- **ISO 19650 standard schema**

Automates field strings: Project-Originator-Volume-Level-Type-Role-Number for strict naming compliance.

Made with GAMMA

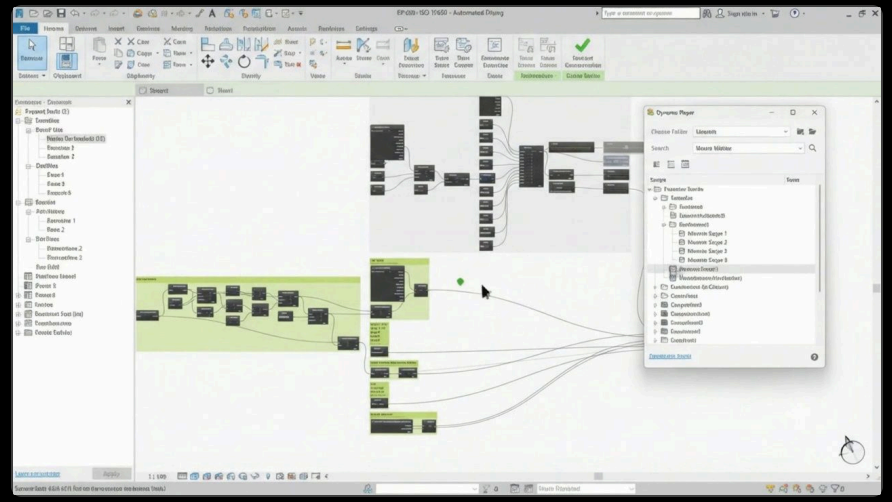

STANDARD EXECUTION

Run it from Dynamo Player

1. Open the Revit model
2. Launch Dynamo Player and choose the script folder
3. Run the exporter
4. Check the new NWC files in the output folder

PRODUCTION OUTCOME

Fresh NWCs, every run

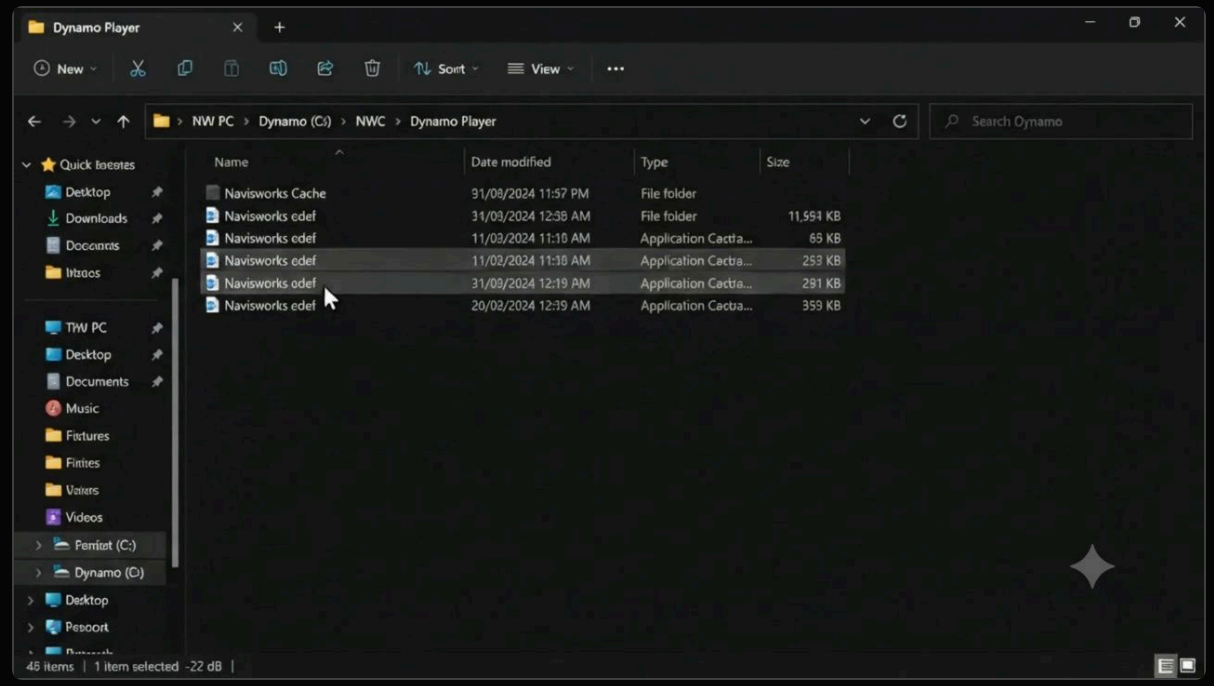

- **Models updated and exported in one run**

((15) HOURS SAVED / WEEK)

- **Manual export errors removed**

((100%) NAMING & PATH ACCURACY)

Coordinators always federate current files, and the team sees exactly what changed.

Target Directory · ISO 19650 Compliant NWC Output Caches

OUTPUT VALIDATION · ZERO RE-EXPORT DRIFT
